2knots

Website guide · November 2026

How the new 21 Knots website works

A short guide for the team: what is on the site, how visitors use it, how to change content, and how to keep it safe.

Pages · Using the site · Changing content · Publishing · Security · Still to do

Pages

What is on the site

57 pages in total. Every page from the old site keeps its exact web address, so old links and Google results still work.

Home

Ocean hero, service areas, offices globe, projects, contact prompt.

About Us

Growth journey, values, team photo, leadership, group companies, offices.

Services

3 area pages, 16 service pages, 25 detailed sub-service pages.

Projects

Filterable project list and a page for each of the 4 projects.

Careers

Life at 21 Knots and how to apply by email.

Contact Us

Message form, quick contacts and all 5 offices.

Using the site

What visitors can do

Feature	How it works
Main menu	Hover or click **Services** to see every service in one panel. On phones, tap the menu button at the top right.
Service panels (home)	Three panels: Design & Engineering, Offshore, Power & Industrial. Point at or tap one to open its list of services.
Offices globe (home)	Drag to spin. Click a pin to turn the globe to that office and see its address, email and a map link.
Growth journey (About)	Scroll down: the line fills and each year lights up as you reach it.
Project filters	On Projects, choose a category such as Green retrofit to narrow the list.
Contact form	Pick a topic, fill in name, email and message, then **Send message**. Errors are explained under each field.

Changing content

Edit one place, the whole site updates

All text, offices, people and projects live in one block called `CONTENT` near the top of the site's script. Change a value there and every page that uses it updates.

1. **Open the site file**
   Open `index.html` in a code editor and search for `const CONTENT`.

2. **Find the section you need**
   `offices` for addresses and emails, `leadership` for names and photos, `projects` for case studies, `journey` for the timeline, `privacy` for the policy text.

3. **Change the text between the quotes**
   Keep the quotes and commas. For example, to add a phone number: `phones: ["+65 9778 4324"]`.

4

Check it, then publish

Open the file in a browser, click through the page you changed, then upload it (see Publishing).

> Adding photos: put the image in the `photo` or `img` field as a file path such as `/assets/team.webp`. Pages without a photo show a blueprint drawing instead.

Publishing

Putting it live

1

Turn on normal web addresses

Add `<script>window.SITE_ROUTER = "path"</script>` before the site scripts, so pages use `/design-services/` instead of `#design-services`.

2

Upload the deploy pack

Upload `index.html`, `sitemap.xml`, `robots.txt`, the `.well-known` folder and either `vercel.json` (Vercel) or `.htaccess` (Apache).

3

Connect the contact form

Set `window.SITE_FORM_ENDPOINT` to your form service address (https only), and add that domain to the security policy.

4

Tell Google

Submit `https://21-knots.com/sitemap.xml` in Google Search Console.

Security

How the site stays safe

No login, no database

Nothing for attackers to break into on the site itself.

Security headers

Strict content policy, HTTPS only, no framing, no MIME sniffing.

Spam-resistant form

Hidden trap field, time check, one message per 30 seconds.

Old WordPress retired

Login and XML-RPC addresses blocked once the new site is live.

Full details are in `SECURITY-AUDIT.md` in the deploy pack. Re-check yearly at securityheaders.com and renew the date in `security.txt`.

Still to do

Content to confirm before launch

Project case studies

Paste the full text of the 4 projects.

Privacy policy wording

Replace with the exact legal text.

Undertaking documents

Add the two document images.

New Jersey company name

Currently shown as "21 Knots, USA".

Timeline years

Confirm 2024 for Zeroqu and the 2025 wording.

Careers email

Confirm careers@21-knots.com.
